Sommario

Backup to NAND

The backup procedure creates a copy of the QCL application in execution and a dump of the retentive data, as files saved in the NAND mass storage. The files created have the following names:

- applic.qcy identifies the file containing the QCL application (CPU)
- appdat.qcy identifies the file containing the retentive data of the QCL application

The procedure performs the following steps:

- Check the presence of the QCL application.
- Create and write in NAND the QCL application backup file: **applic.qcy**.
- Check the presence and validity of retentive data of the QCL application.
- Create and write in NAND the retentive data backup file of the QCL application: **appdat.qcy**.
- Procedure end and system reboot.
