

Sommario

Remove all files from NAND Flash

Delete all files contained on the internal NAND flash mass storage.

Unlike the “Format NAND Flash” function, this acts at a filesystem level and can therefore be performed as many times as necessary.

The procedure performs the following steps:

- Calculation of the number of files contained in the internal mass storage.
- The “Searching files...” message is given.
- If zero files are found, the “No Files Found” message is given and the function ends, otherwise the “Delete <filename>” is given indicating the deletion of every file found.
- Close the internal storage and end procedure
