

Sommario

ATAN (Arc Tangent)	3
---------------------------------	---

ATAN (Arc Tangent)

Function name	ATAN_010
Function version	1.0
Function state	stable
Compatibility with IEC61131-3	not compatible

Graphic symbol :

Input / Output :

Name	Belonging Group	Access	Types of data	Description
EN	Left Power Flow			IEC1131-3 enable input
A	Normal	R , RW	F , B , W , L , S	Input variable A
Q	Normal	W , RW	F , B , W , L , S	Result of the operation in radians Q = ATAN(A)
ENO	Right Power Flow			IEC1131-3 enable output

Description :

This function executes the operation Arctangent; it calculates the trigonometric function arctangent of the value A and place the result in Q. The output angle is in radians. To convert an angle from degrees to radians, you have to multiply it by 1.745329E-2 (corresponding to about pi / 180).
