## MUL (2 Variables Multiplication)

<b>Function name</b>	MUL_010
<b>Function version</b>	1.0
<b>Function state</b>	stable
<b>Compatibility with IEC61131-3</b>	not compatible

**Graphic symbol :**

**Input / Output :**

Name	Belonging Group	Access	Types of data	Description
EN	Left Power Flow			IEC1131-3 enable input
A	Normal	R , RW	F , B , W , L , S	Input variable A
B	Normal	R , RW	F , B , W , L , S	Input variable B
Q	Normal	W , RW	F , B , W , L , S	Result of the operation Q = (A) * (B)
ENO	Right Power Flow			IEC1131-3 enable output

**Description :**

The function Multiplication multiplies A and B and place the result in the specified variable from Q.

The eventual overflow in the result (Q) is ignored.

Note: the numbers in floating point are represented in the format described in the standard 754-1985 ANSI/IEEE (in single precision). For further representation about the argument, refers to that law.
