<i>Bit Test</i>	3
------------------------------	---

Bit Test

Function name	QTSTB_010
Function version	1.0
Function state	stable
Compatibility with IEC61131-3	not compatible

Graphic symbol :

Input / Output :

Name	Belonging Group	Access	Types of data	Description
Data	Normal	R , RW	F , B , W , L	Data in which to test the bit
Bit	Normal	R , RW	F , B , W , L	Data with the number of bits to test
Q	Right Power Flow			Resulting state of the elaboration function

Description :

The function bit Test, combines through AND the corresponding bits of the variable Data with the bits of the variable maschera and load the Boolean result in the variable Q.

Where the variable **maschera** is: **maschera** = 2 Bit

Error conditions that sets ENO = 0: none.
