Sommario

VC10TCoupleT

The VC10TCoupleT function <u>Converts a voltage value, expressed in microvolts, to the corresponding temperature value, expressed in tenths of a Celsius degree, connected withe a thermocouple type T</u>.
Input range : from -5600 µV to 21000 µV

Output range : from -1998 °C^{-1} to 4020 °C^{-1}

IMPLEMENTATION

VC10TCoupleT (mvhot, dgradi_hot, gbError)

Parameters:

IN/OUT	VARIABLE TYPE	EXAMPLE NAME	DIM	
IN	GLOBAL	mvhot	L	It is the voltage value to convert expressed in micro Volts.
OUT	GLOBAL	dgradi_hot	L	It is the converted temperature value expressed in tenths of a Celsius degree.
OUT	GLOBAL	gbError	B	Variable containing the error code

Error

Once invoked the function if there are any errors the error variable having the following values:
0 - No error
1 - Value less than the minimum
2 - Value higher than the maximum
3 - Value indicating disconnected input

Example

```
...

; Cold-junction reading
card_type = 0 ; using L1TT0 card
IR10CJRead (COLD, card_type, dgradi_cold, error)
...
; Hot-junction reading
card_type = 0
IR10HJRead (HOT, card_type, mvhot, error)
...
VC10TCoupleT (mvhot, dgradi_hot, gbError)
...
temperature = dgradi_cold + dgradi_hot
...
```
